**Lumache** (/lu'make/) is a Python library for cooks and food lovers that creates recipes mixing random ingredients.

Lumache has its documentation hosted on Read the Docs.

**Hello, world!!!**

**Hello, world!!!**

**Hello, world!!!**

It pulls data from the [Open Food Facts database](#) and offers a *simple* and *intuitive* API.

Check out the [Usage](#) section for further information, including how to [Installation](#) the project.

---

**Note:** This project is under active development.

Hello, world!!!

## 1.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

## 1.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

The `kind` parameter should be either "meat", "fish", or "veggies". Otherwise, `lumache.get_random_ingredients()` will raise an exception.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```
